What is HD?

Huntington disease (HD) is a devastating, degenerative brain disorder that one in every 7,000 Canadians has. The symptoms are like having aspects of Alzheimer's, Parkinson's and ALS in one disease. Every child of a parent with HD has a 50% chance of inheriting the disease. There is currently no cure.

The Huntington Society of Canada (HSC) aspires to a world free from Huntington Disease (HD). Together, with your support, HSC maximizes the quality of life of people living with HD through services, support, advocacy, and research. Your support will help provide services for Manitobans dealing with HD in their lives. Thank you so much!

We thank you for your continued support.

Brett Mitchell –
Race Director
